

ASSEMBLY INSTRUCTION OF FLOOR MATS

1. Cut off the hooks (1) on which the floor mats were hung up.
2. Place the floor mats inside a car. Check the locations of any retention devices on the floor and mark them on the floor mats.
Cut holes at the marked spots (2).
3. In the prepared holes, from underneath of the floor mat put the bottom elements of clips (3) in. Place the floor mat on the car's floor, so the pins (if there are ones) originally mounted on the floor go through the holes.
Put the upper elements of the clips (4) on the pins and press until they shut.
4. In case there are no holes or pins on the car's floor originally, please go over the following steps at first:
 - * Place the floor mat on the car's floor and locate the spots to be used for the clips.
 - ⚠ **Attention:** please make sure the driver's floor mat is not blocking the pedals.
 - * With a sharp tool (screw or needle tool) make holes in the original carpet.
 - ⚠ **Attention:** be careful not to damage the metal base of the floor.
 - * In the holes install the plastic pins (5). Then go over the steps 1-3.
